### Notes:

**Es:-Establishment-->**The physical location of a certain economic activity--for example, a factory, mine, store, or office. A single establishment generally produces a single good or provides a single service. An enterprise (a private firm, government, or nonprofit organization) can consist of a single establishment or multiple establishments. All establishments in an enterprise may be classified in one industry (e.g., a chain), or they may be classified in different industries (e.g., a conglomerate).

**E:-Employment-->**Persons 16 years and over in the civilian noninstitutional population who, during the reference week, (a) did any work at all (at least 1 hour) as paid employees; worked in their own business, profession, or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family; and (b) all those who were not working but who had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job. Excluded are persons whose only activity consisted of work around their own house (painting, repairing, or own home housework) or volunteer work for religious, charitable, and other organizations.

**Tw:-Total Wages-->**Remuneration (pay, wages) of a worker or group of workers for services performed during a specific period of time. The term usually carries a defining word or phrase, such as straight-time average hourly earnings. Because a statistical concept is usually involved in the term and its variations, the producers and users of earnings data should define them clearly. In the absence of such definitions, the following may serve as rough guidelines:

Hourly, daily, weekly, annual: period of time to which earnings figures, as stated or computed, relate. The context in which annual earnings (sometimes weekly earnings) are used may indicate whether the reference includes earnings from one employer only or from all employment plus other sources of income.

Average: usually refers to the arithmetic mean; that is, total earnings (as defined) of a group of workers (as identified) divided by the number of workers in the group.

Gross: usually refers to total earnings, before any deductions (such as tax withholding) including, where applicable, overtime payments, shift differentials, production bonuses, cost-of-living allowances, commissions, etc.

Straight-time: usually refers to gross earnings excluding overtime payments and (with variations at this point) shift differentials and other monetary payments.

**Ind:-Industries-->**A group of establishments that produce similar products or provide similar services. For example, all establishments that manufacture automobiles are in the same industry. A given industry, or even a particular establishment in that industry, might have employees in dozens of occupations. The North American Industry Classification System (NAICS) groups similar establishments into industries. NAICS is replacing the former Standard Industrial Classification (SIC) system.

**Area:-State/ County numbers.**Example - 47- TN, 023 - Williamson county; Combined - 47023 - used to joined the industries text file to the US county shapefile
